DIGITAL MELTING / BOILING POINT APPARATUS

MODEL NO - ALE-930/ALE-934

This is a compact instrument designed for accurate determinations of melting points of solid samples and boiling point of liquid samples.

The apparatus consists of in-built magnetic stirrer, an electronic controller with indicator for precisely adjusting the rate of heating of silicon oil-bath, an ON/OFF switch, a pilot lamp, with magnifier, a glare free background illuminator, a high/low range temperature selector switch and digital temperature indicator with PT100 RTD sensor.

Features

- Covered cylindrical Silicon Oil Bath for safety of operator
- Built-in Magnetic Stirrer with electronic speed controller
- Electronic Controller for adjusting the heating rate
- Digital Display of Temperature with PT-100 Sensor
- Glare-free back-ground LED light with adjustable light intensity
- Provision for holding the melting point display when sample melts
- Built-in image magnifier for clear vision of sample
